

Satellite radio should always be allowed to broadcast weather and traffic reports for local conditions. I seldom listen to regular radio any more since I have had XM satellite radio and there weather and traffic reports have be very timely for me and I do not have to wade through a miriad of commercials to hear what I need to hear. Toranadoes do not wait for commercials. If satellite radio is stopped from providing this great service then I find it would be the severest form of censorship that I find totally unacceptable.
